Multi-aircraft discounts available

* AVANCE L3 Core supports email, voice and internet browsing capabilities limited to websites that are light on content: such as minimal imagery and graphics, and no embedded video. On average, customers with Core configurations connect 4 devices per flight and use 30% less data than Plus and Max configurations.

** If streaming is required, consider the Gogo AVANCE L5 system, which connects to the Gogo Biz 4G network.

*** Hourly rate includes both voice and data service. No additional discounts apply. If you're considering an hourly plan for connectivity service, please be aware that any device connecting to the internet via the cabin Wi-Fi network triggers the $99 hourly charge, even if minimal data is passed. This may result in data charges when using Gogo Vision. The only way to help prevent these internet connections is to ask your dealer to install all bearer Enable/Disable discretes during system installation.

**** Exclusions and limitations apply. Contact Gogo Business Aviation Sales for details. Terms: 12-month term; price is per aircraft; prepay required; overages are billed monthly per aircraft; rollover of unused MBs is allowed from month-to-month but expire at end of the agreement term; may purchase additional buckets at any time.
